

HIV IN ARKANSAS

In 2021, there were 6,225 people living with HIV in Arkansas. That same year, 338 people were newly diagnosed with HIV.

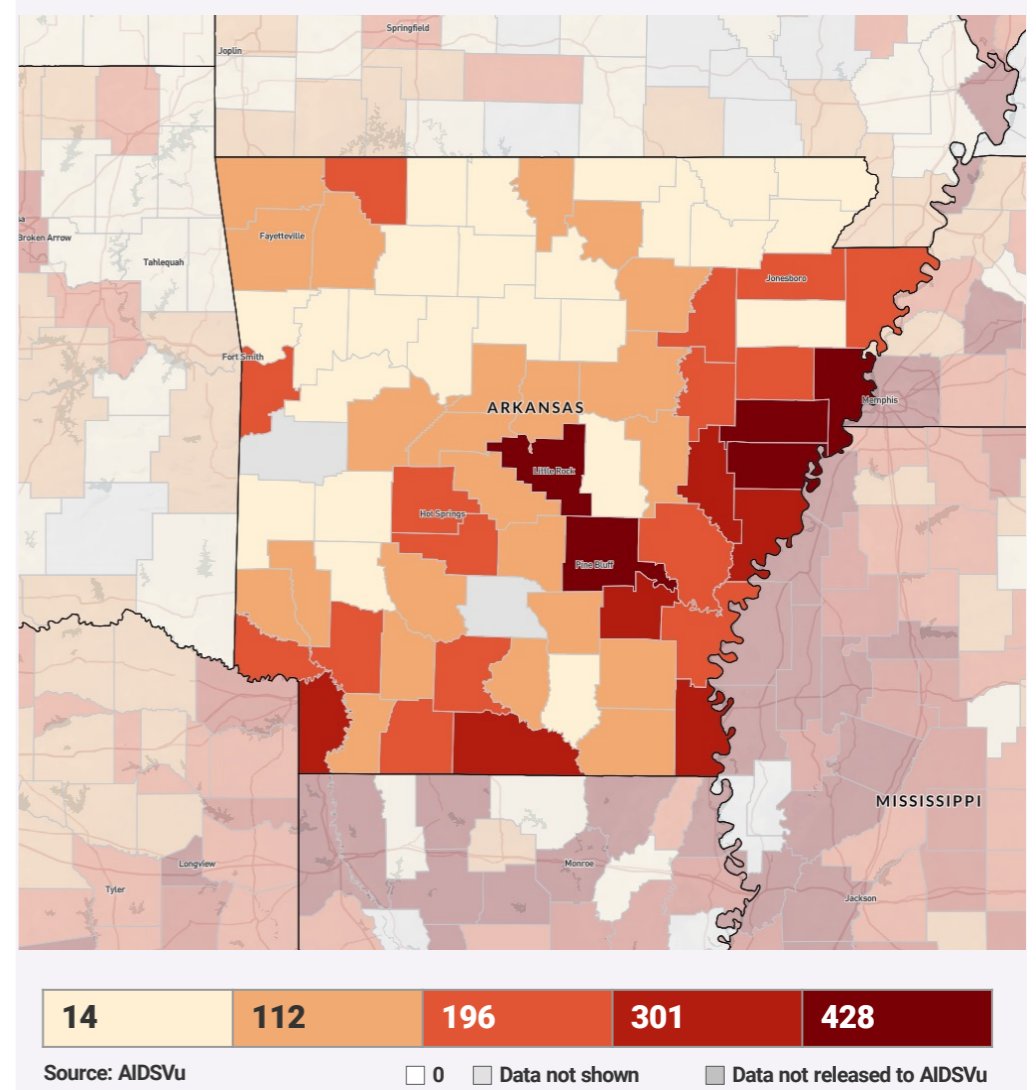

Rate of people living with HIV per 100,000 population, by Geography, 2021

Percent of people living with HIV in Arkansas, by Race/Ethnicity, 2021

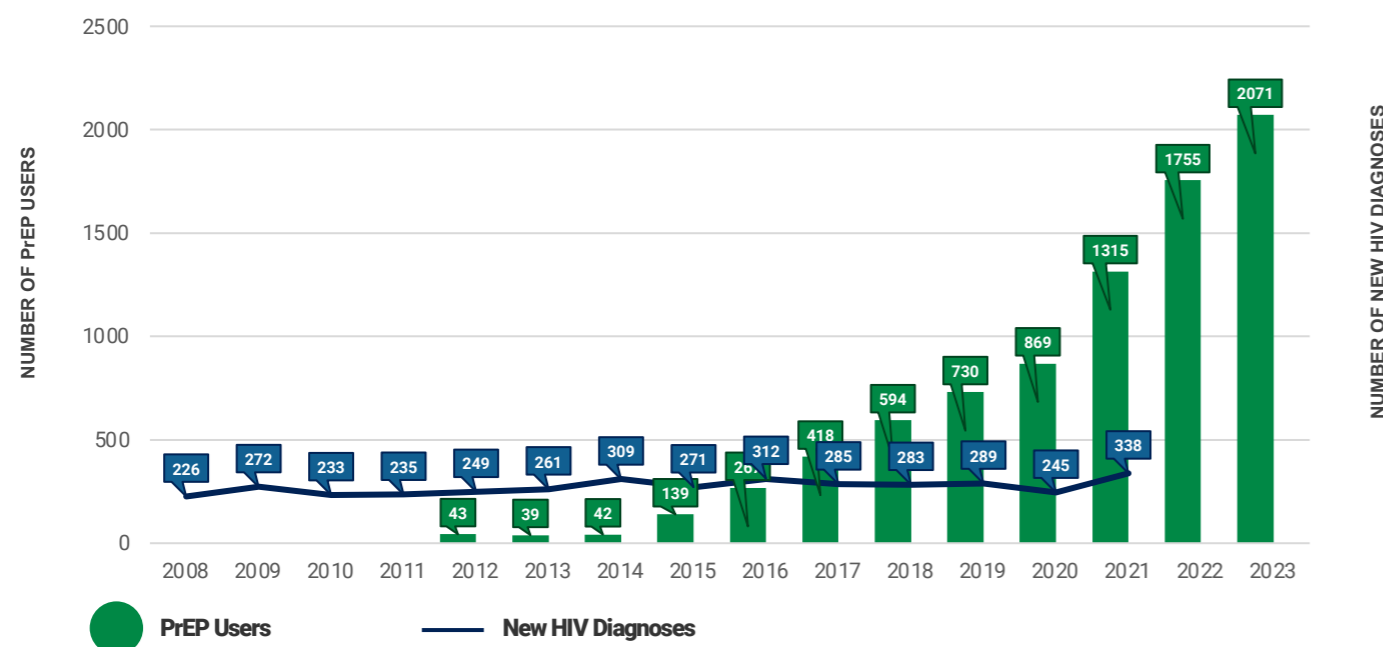

Rates of Persons Living with HIV per 100k, 2021

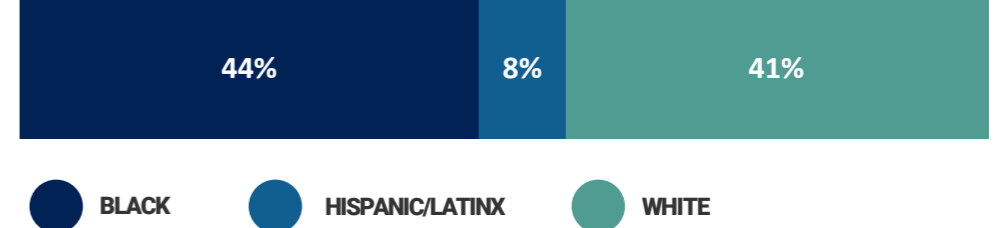

New HIV Diagnoses & PrEP Use

Pre-exposure prophylaxis, or PrEP, can protect people from acquiring HIV. We know that PrEP works in reducing new HIV diagnoses. Yet, PrEP use is not equitable. For example, Black people represented half (49%) of new HIV diagnoses in the South, yet were only 21% of PrEP users in the region.

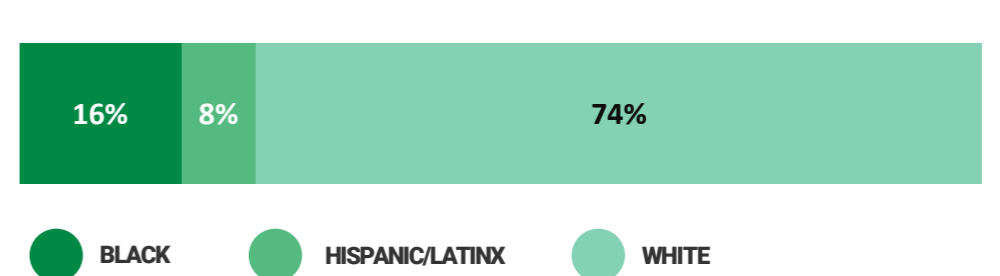

Number of PrEP Users in Arkansas, 2012-2023 vs. Number of New HIV Diagnoses in Arkansas, 2008-2021
