

HIV IN DELAWARE

In 2021, there were **3,515** people living with HIV in Delaware. That same year, **81** people were newly diagnosed with HIV.

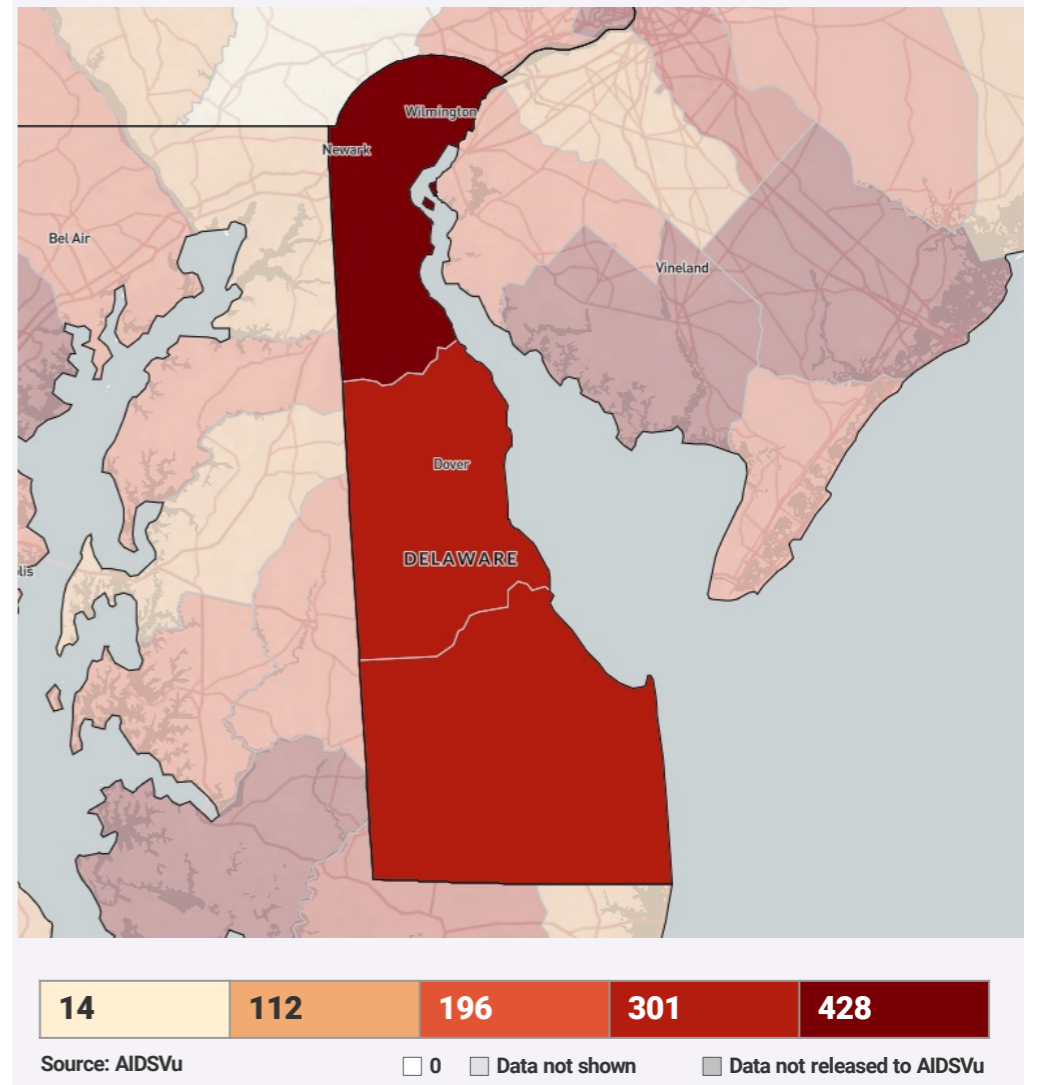

Rate of people living with HIV per 100,000 population, by Geography, 2021

Percent of people living with HIV in Delaware, by Race/Ethnicity, 2021

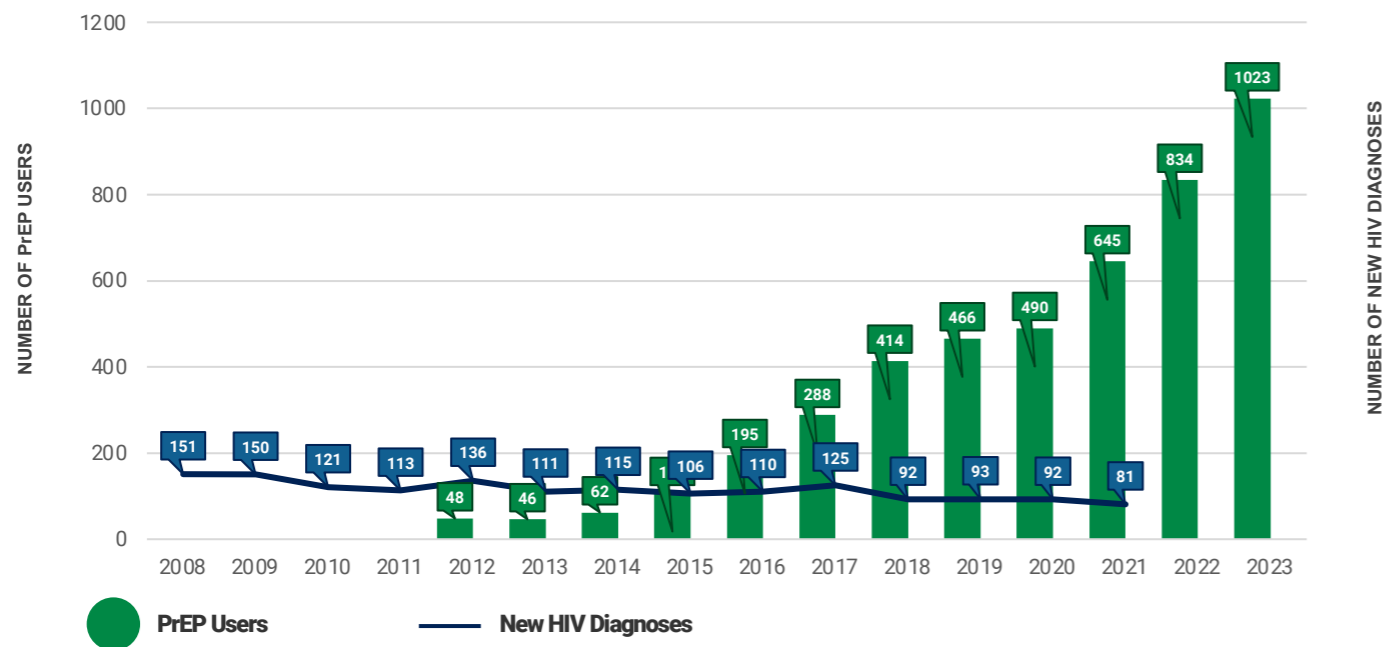

Rates of Persons Living with HIV per 100k, 2021

New HIV Diagnoses & PrEP Use

Pre-exposure prophylaxis, or PrEP, can protect people from acquiring HIV. We know that PrEP works in reducing new HIV diagnoses. Yet, PrEP use is not equitable. For example, **Black people represented half (49%) of new HIV diagnoses in the South, yet were only 21% of PrEP users in the region.**

Number of PrEP Users in Delaware, 2012-2023 vs. Number of New HIV Diagnoses in Delaware, 2008-2021

Percent of people newly diagnosed with HIV in Delaware, by Race/Ethnicity, 2023

Percent of PrEP users in Delaware, by Race/Ethnicity, 2023

Viral HIV Suppression

Viral suppression is defined as those living with diagnosed HIV who had suppressed HIV viral load (<200 copies/mL).

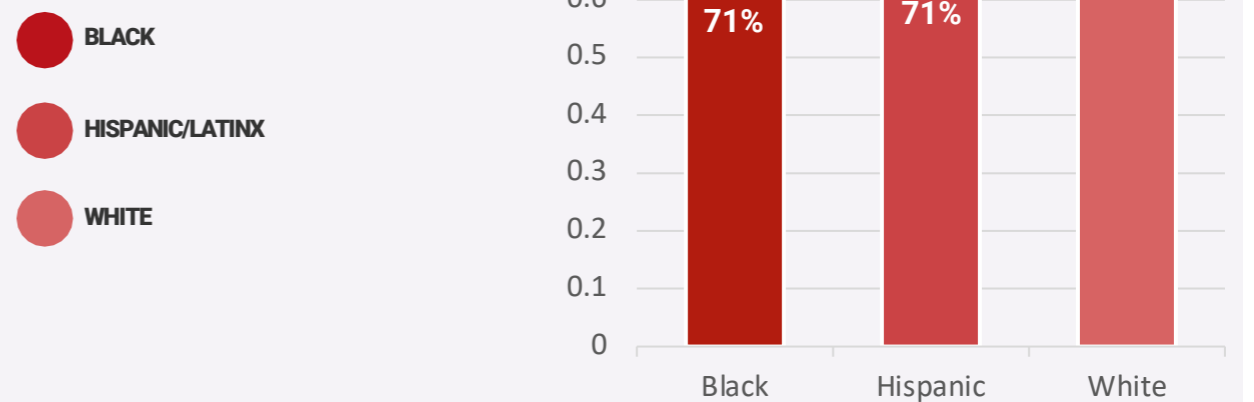

Number of people living with HIV who were virally suppressed in Delaware, 2023:

2,525

Percent of people living with HIV who were virally suppressed in Delaware, 2023:

73%

Proportion of people virally suppressed in Delaware, by Race/Ethnicity, 2021
