

HIV IN VIRGINIA

In 2021, there were **24,411** people living with HIV in Virginia. That same year, **792** people were newly diagnosed with HIV.

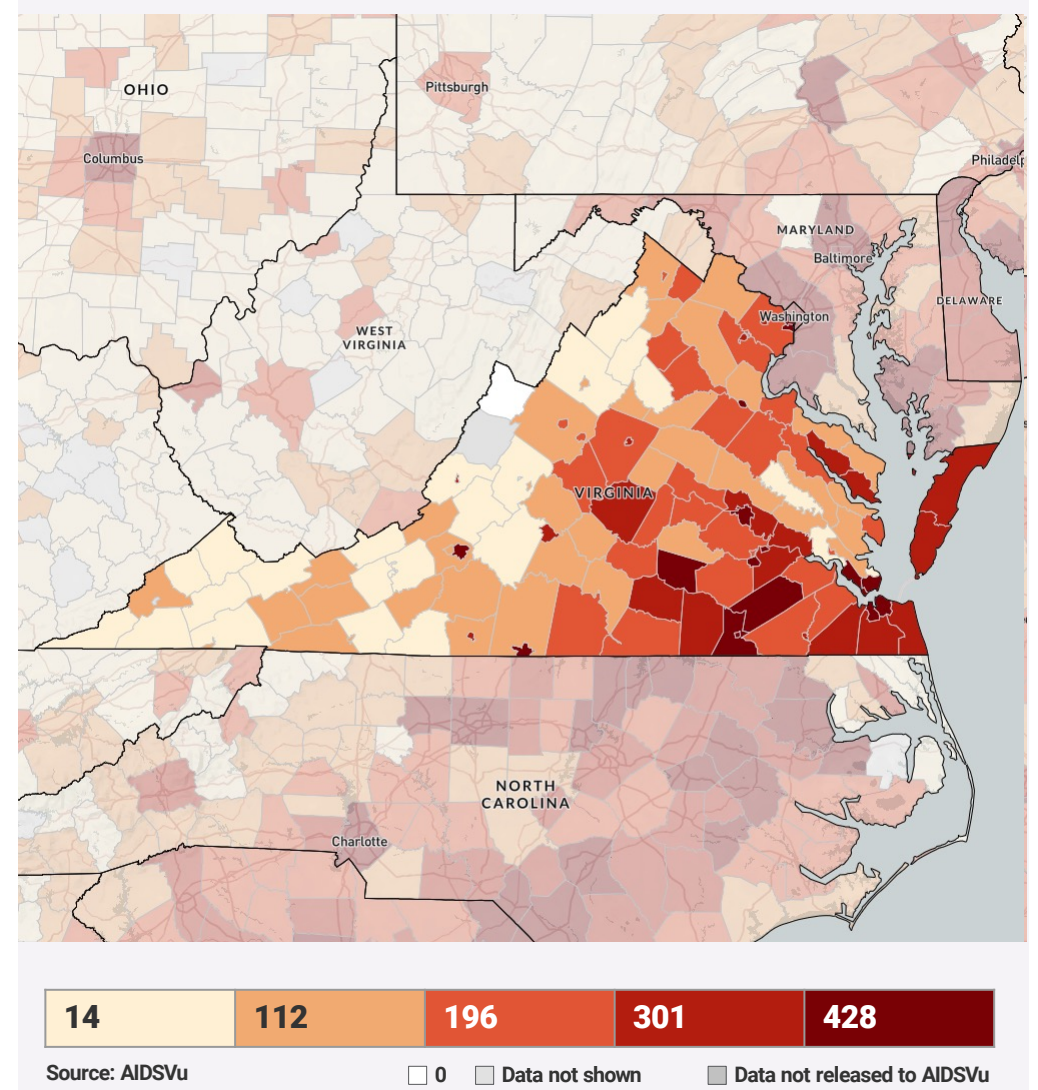

Rate of people living with HIV per 100,000 population, by Geography, 2021

Percent of people living with HIV in Virginia, by Race/Ethnicity, 2021

Rates of Persons Living with HIV per 100k, 2021

New HIV Diagnoses & PrEP Use

Pre-exposure prophylaxis, or PrEP, can protect people from acquiring HIV. We know that PrEP works in reducing new HIV diagnoses. Yet, PrEP use is not equitable. For example, **Black people represented half (49%) of new HIV diagnoses in the South, yet were only 21% of PrEP users in the region.**

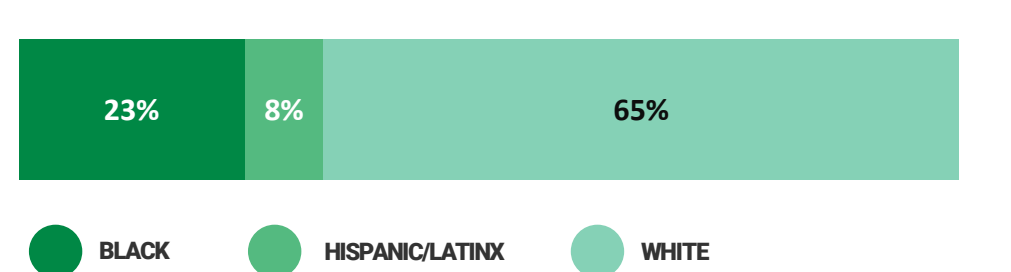

Number of PrEP Users in Virginia, 2012-2023 vs. Number of New HIV Diagnoses in Virginia, 2008-2021

Percent of people newly diagnosed with HIV in Virginia, by Race/Ethnicity, 2021

Percent of PrEP users in Virginia, by Race/Ethnicity, 2023

Viral HIV Suppression

Viral suppression is defined as those living with diagnosed HIV who had suppressed HIV viral load (<200 copies/mL).

Number of people living with HIV who were virally suppressed in Virginia, 2021:

15,378

Percent of people living with HIV who were virally suppressed in Virginia, 2021:

65%

Proportion of people virally suppressed in Virginia, by Race/Ethnicity, 2021
